Fabric Features & Information

Soil Release

This Soil Release mark indicates products treated with a Soil-Release (moisture-absorbing) finish, making it easy to remove stains. (Please note that some stains may not be completely removed.)

- The finish allows water and detergents to penetrate the fabric easily, making it possible to remove grease stains through home laundering.
- Even with repeated washing, there is minimal color fading or discoloration, virtually no shrinkage orstretching, ensuring long-lasting durability.
- If smoothed out before drying, it can be used without ironing (non-iron), and features a quick-drying property.
- The Soil Release effect.

Notes:
- The Soil-Release (SR) effect will be weakened if washed at high temperatures or with highly alkaline detergents.
- The instructions above apply only to 100% polyester products.

Soil Guard

This Soil Guard mark indicates products treated with a Soil-Guard (water-repellent) finish that repels water and prevents stains from adhering. Most stains can be removed simply by wiping off.

(Please note that some stains may not be completely removed.)

- Even if the tablecloth cannot be replaced immediately, guests can continue dining comfortably because stains stay on the surface and can easily be wiped away.
- Since most stains can be removed simply by wiping with a dry cloth (or cloth dampened with water for dried stains), the need to reset the table is minimized,reducing labor time and staffing requirements.

Care Instructions:

- Do not wipe with a cloth containing detergent, as this will weaken the water-repellent effect and may cause discoloration or contamination.
- Iron at a medium temperature (160–180°C / 320–356°F) after washing. Failure to iron will reduce the water-repellent effect.
- Liquids left for a long time or stains pressed into the fabric by the weight of tableware may penetrate the fibers and become unremovable.
- The instructions above apply only to 100% polyester products.

Static Protection

This mark indicates products with anti-static properties.

- Products with this mark feature anti-static threads woven into the fabric. This helps reduce static electricity generated by friction and minimizes cling and static-related problems during handling and replacement.

Flame Retardant

This mark indicates products with a flame-retardant finish.

Custom pattern

Custom-designed patterns are available upon request with a minimum order of approximately **40–50 meters (44–55 yards)** per design.
(SR and SG finishes are also available.)

Custom Color

Custom colors are available upon request with a minimum order of approximately **40–50 meters (44–55 yards)** per color.
(SR and SG finishes are also available.)

Our catalog “J-vague vol.6 Hotel Linen,” featuring a comprehensive selection of guest room linens, is also available.

Our catalog “J-vague vol.6 Hotel Equip,” featuring a comprehensive selection of bedding, room amenities and more, is also available.
